<tr>
<td>Course name</td>
<td>Water management and water protection</td>
</tr>
<tr>
<td>Course type</td>
<td>Erasmus</td>
</tr>
<tr>
<td>Forms and number of hours of tuition</td>
<td>Semester</td>
</tr>
<tr>
<td>L</td>
<td>C</td>
</tr>
<tr>
<td>15</td>
<td>30</td>
</tr>
<tr>
<td>Entry requirements</td>
<td>basic knowledge of sanitary chemistry, hydrology</td>
</tr>
<tr>
<td>Course objectives</td>
<td>The aim of the course is to provide students with information on hydrological phenomena and processes used in water management, as well as on the resources and classification of waters and their sources of pollution, and to prepare them for scientific research. Explaining the principles of water protection and water management in Poland. To acquaint the student with the instruments of water management and the effectiveness of their application, as well as with the current Polish law on water management and water protection.</td>
</tr>
<tr>
<td>Course content</td>
<td>The lab classes: Location of measurement and control points taking into account field conditions, distribution of industry, sewage treatment plants, principles of taking, recording and preparing environmental samples for analysis, performing field determinations of basic water quality indicators, developing results of chemical analysis, assessment of chemical condition.</td>
</tr>
<tr>
<td>Teaching methods</td>
<td>Laboratory classes</td>
</tr>
<tr>
<td>Assessment method</td>
<td>ERASMUS students are expected to plan the study of water quality in order to achieve the assumed objectives of the experiments, and then prepare reports with the interpretation of the obtained research results and prepare of given case study</td>
</tr>
<tr>
<td>Symbol of learning outcome</td>
<td>Learning outcomes</td>
</tr>
<tr>
<td>LO1</td>
<td>student knows and understands to an advanced degree selected phenomena, processes and objects, constituting the basic knowledge of hydrology, land reclamation in environmental engineering, in particular water circulation in nature, water resources, water protection against pollution, as well as self-purification processes.</td>
</tr>
<tr>
<td>Symbol of learning outcome</td>
<td>LO2</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----</td>
</tr>
<tr>
<td>LO2</td>
<td>knows and understands at an advanced level - basic methods of physical and chemical analyses, processes and phenomena occurring in water, assesses the state of water purity</td>
</tr>
<tr>
<td>LO3</td>
<td>knows and understands, to an advanced degree, the general principles of environmental impact assessment, and in particular the assessment of the impact of wastewater on the receiver</td>
</tr>
<tr>
<td>LO4</td>
<td>is able to correctly plan and perform physico-chemical research using specialist scientific and research equipment, interpret its results and on this basis draw appropriate conclusions</td>
</tr>
<tr>
<td>LO5</td>
<td>is able to properly select and use the methods and tools learned, including advanced information, simulation and experimental techniques when solving complex engineering problems</td>
</tr>
<tr>
<td>LO6</td>
<td>is able to use scientific, popular science and industry literature, subject standards, legal acts, Internet databases, properly use the information obtained, as well as draw conclusions and formulate and present opinions</td>
</tr>
</tbody>
