

COURSE DESCRIPTION CARD – SPECIMEN

Faculty of Electrical Engineering									
Field of study	Automatic Control and Robotics							Degree level and programme type	Bachelor's degree
Specialization/ diploma path	general							Study profile	
Course name	Modern Control of Mechatronics Systems							Course code	IS-FEE-10066S
								Course type	elective
Forms and number of hours of tuition	L	C	LC	P	SW	FW	S	Semester	summer
	15			15				No. of ECTS credits	5
Entry requirements	-								
Course objectives	This course deals with the study of control theory including advanced robust optimal methods, such as H-infinity, mu-Synthesis, LMI, mixed-sensitivity, loop-shaping, uncertain systems, nonlinear observers, feedback linearization, control Lyapunov functions. Moreover, these designs with its applications to the mechatronics systems, including electro-drives, electrical circuits, electro-mechanical, electro-pneumatics, and hydraulics. Major course topics include knowledge of linear/nonlinear and applications engineering principles and methodologies used to solve advanced problems in control systems.								
Course content	Principle subject outcomes include sensitivity and complementary sensitivity functions, H-2 and H-inf spaces. Dynamic systems with linear-parameter-varying. Design of structured and unstructured uncertainty. Robustness, small-gain theorem. Linear fractional transformation. Optimal control with H-2 or H-infinity. Mu-synthesis control. System order minimization. Stability of the nonlinear control systems according to control Lyapunov functions.								
Teaching methods	power-point presentations, Matlab/Simulink software, Matlab/Simulink Toolboxes, project examples, MathWorks help, text books, other documents given by the teacher								
Assessment method	lecture – written exam, project – project completion, presentation and discussion, performance of the project								
Symbol of learning outcome	Learning outcomes							Reference to the learning outcomes for the field of study	
LO1	Basic knowledge of robust control design and application including optimal control, LFT models, and LPV systems							SM_W11 SM_W05	
LO2	Basic knowledge of system order reduction and minimization methods, calculating of the system's norms							SM_W16	
LO3	Practical skills of stability calculating and control performance index for closed-loop dynamic systems							SM_U12	
LO4	practical skills needed to develop and calculate the							SM_U12 SM_U08	

	modelling of the uncertain systems and robustness		
L05	skills and knowledge acquired to numerical calculations and simulation of linear/nonlinear control system using Matlab/Simulink	SM_U12	
L06	demand for cooperation with other student within group, as well as an increased awareness of its vital importance for development	SM_K01	
Symbol of learning outcome	Methods of assessing the learning outcomes	Type of tuition during which the outcome is assessed	
L01	written exam, project evaluation, activity on project classes	L, P	
L02	written exam, project evaluation, activity on project classes	L, P	
L03	written exam, project evaluation, activity on project classes	L, P	
L04	written exam, project evaluation, activity on project classes	L, P	
L05	written exam, project evaluation, activity on project classes	L, P	
L06	student activity on project classes	P	
Student workload (in hours)		No. of hours	
Calculation	lecture attendance	15	
	participation in classes, laboratory classes, etc.	15	
	preparation for classes, laboratory classes, projects, seminars, etc.	30	
	working on projects, reports, etc.	20	
	participation in student-teacher sessions related to the classes/seminar/project	8	
	TOTAL:	88	
Quantitative indicators		HOURS	No. of ECTS credits
Student workload – activities that require direct teacher participation		38	1.5
Student workload – practical activities		54	2
Basic references	1. Matlab examples. 2. Robust Control Toolbox, R2023b. 3. Robust Control, Robust Control, Matlab videos, parts 1, 2, 3, 4, and 5. 4. Richard C. Dorf, Robert H. Bishop, Modern Control Systems, 14th edition, Pearson Education Inc, 2022. ISBN: 9780137307258.

Organisational unit conducting the course	Department of Automatic Control and Robotics	Date of issuing the programme	
Author of the programme	Assoc Prof. Arkadiusz Mystkowski, PhD, DSc, Eng	27.01.2023	

L – lecture, C – classes, LC – laboratory classes, P – project, SW – specialization workshop, FW - field work,

S – seminar

Please notice!

Depending on number of students enrolled for the subject hours of tuition are as follows (for each 30 hours given in course description card):

1 – 2 students - 5 hours of tuition hours;

3 – 4 students - 8 hours of tuition;

5 – 6 students - 11 hours of tuition;

7 – 8 students - 15 hours of tuition;

9 and more students - hours of tuition given by a teacher as regular classes.
