Erasmus plus final report

Live six month in Europe in the half of my career is the best opportunity that I have ever had in my life. When my University call me, I did not know what Erasmus means and I would not know it until I arrived in Poland. In this report I will give my opinion of some points about my stay in Bialystok.

First of all, my faculty is management, and it is located a few minutes from the residence. But it was not a problem because the public transport works property in the city. The accommodation in the faculty are in the best conditions and students take care of it. Professors are really respectful and they help me in every doubt connected with the subject. They also were considered with the language, they know that study in another language different from mother language is very difficult.

About the Residence, I stayed in BETA dorm and it has everything that you need for live a few month, I did not need something else. Every problem they fixed in the same day of the problem. Furthermore, I felt safety because the control of the door is 24 hours.

Although Bialystok is not a big city, every time that I needed something, I have found it. It is a safety and clean place and the traffic is respectful. Moreover, the bicycles of the city were so useful and easy to use because of the system and the bike path. Unfortunately, not all of the citizens are friendly, but I did not have big problems with it.

Finally, the group of students of ESN (Erasmus Students Network) was so helpful. They organized a lot of integration activities during the all semester. They have an important place in the everyday life of a foreign student. They helped us to find other Erasmus students and when we had a problem, they do not doubt in give us help, does not matter if it was something small or big. My mentor was with me in every office to fix all documents when I arrived and she always answered me. If she could not go with me somewhere, she ask to a friend of her to go with me.

Erasmus put in my hands something that for an American student is almost unattainable. Live in a country that is complete different to mine, share time with people from a lot of countries and do thing that I have never done before, made me see that exist more than one way to live and there is always something more to learn. This experience left me only good memories and thanks. I wish more Argentinians like me can have this this opportunity and European students can travel to my country, because a lot of them want to know our culture. I hope agreements between countries grow up and travel to a Europe or travel to South America stop being a dream and start to be a reality. There are still plenty of thing to learn from the other.
