

I love the country of Poland. There are a lot of good memories here. The people here are very nice, very warm. The environment here is very beautiful, very environmentally friendly. Blue sky and white clouds, people are relaxed and happy.

As for learning aspect. The teachers are very friendly and can provide help where we do not know. The teacher will explain seriously and teacher will give us homework, we will find the problem in the homework. Then the teacher will discuss with us in the class . In short, we have made great progress in communication with people, in language of learning, in exploration and innovation. If you want me to make a suggestion, I hope to add a little experimental time, we can learn the theory and then go to the laboratory to do the experiment, so perhaps its better to understand the principle more favorable.

As for cultural , the students here are very good, they are passionate, I am more shy , its their enthusiasm so that I have changed, I became open , I like the feeling of going to the party with them . Thanks for them, thanks to Poland.

Poland is a very good country, has a long history. The city is very beautiful here, Gdansk, Krakow, Warsaw, are very beautiful city, it is worth to take a trip. In short, thanks to Poland, thanks to the bialystok University of technology, I love Poland, Poland let me grow, Poland bring me progress. I love Poland, I love the university. If there is a chance, I will

be back here, back to this beautiful city, living here, because I like  
here, Białystok.
