

## **Mobile and WEB Application Tester**

**Place of Work: Białystok / Łódź**

### **By joining our team:**

- You will not sign any loyalties!
- You decide on the form of our cooperation - always having annual leave
- After the trial period, you sign a contract for an indefinite period - we want you permanently, not "for a while"
- You receive a satisfactory salary
- You have the opportunity to participate in training courses and conferences tailored to the needs of your position
- You decide about your working hours
- We will co-finance the MultiSport card of your choice
- You can attend our non-standard English language classes
- You work in international projects in a team that goes beyond the usual patterns and looks for out of the box solutions!
- You have our support while "at work" but, if necessary, also in "off-work" situations;)
- You become a member of the original LBPro LoyaltyBox program - you collect points and you choose your rewards
- You use the LBPro BookZone anytime you want
- You participate in competitions and events - check our social media and see "how we have fun"
- You have a parking space for your car, scooter or bicycle in front of a well-situated office.

### **What we expect from you?**

- experience of working in a similar position
- good knowledge of SQL / MSSQL
- at least basic knowledge of HTTP and REST API
- command of the English language at a level enabling work with technical documentation and free communication in speech and in writing
- skills in writing technical documentation and creating test cases
- ability to think analytically and draw conclusions, which means the ability to analyze tests,
- perceptiveness and regularity
- consistency in undertaken actions
- independence and meticulousness bordering on perfectionism
- teamwork and high communication skills
- passion for tracking "bugs" and ingenuity in "breaking" systems and undermining the statements "it works for me"

Your additional advantage will be:

- knowledge of JIRA, Postman, Confluence, Swagger

### **What will you do with us?**

- "breaking" systems with premeditation and creatively inventing new ways to do it - you will design, develop and implement plans and test cases
- verification and undermining of the statements "it works for me" - you conduct tests (functional and non-functional) while using manual and automatic methods
- reporting on the tests carried out
- bug tracking and description
- software quality verification

- updating test documentation
- active cooperation with the team responsible for the project delivery
- ensuring high-quality deployments
- realistically develop our products
